The ISC Colour Video door entry system includes a monitor and CCD camera at the door.

The video phone includes a flat screen monitor with both contrast and brightness adjustment controls.

As standard the kit comes with monochrome camera and monitor but it is also available with colour equipment at extra cost. The colour systems are not recommended when there is poor lighting at the door - colour cameras are insensitive to infra red light.

The stand alone model is available with a conventional wall mounted handset and screen or a handheld device with screen on board. This has to be wired in so cannot be carried around but may be easier for some users to operate.
