

Net2 Access Control System

Card swipe or proximity readers

Benn Net2 PC based access control

It's simplicity is it's strength.

You will find door control is simplicity itself with the Benn Net2 Access Control system. Fully installed and commissioned by our own in house experts.

- ★ Access to your premises is restricted to legitimate users only
- ★ Area limited access for some cards
- ★ Simple for you to use and manage intuitive software – including user training
- ★ Individually invalidate lost or stolen cards or tokens
- ★ Accepts up to 10,000 different users
- ★ Straightforward installation
- ★ Central programming and reporting
- ★ Flexible control over access and privileges
- ★ Event buffering if power or computer fails
- ★ Pentium III with Windows 2000 or XP required

The Benn electronic access control system can be designed for cards or miniature tokens.

A card or token reader is installed adjacent to the door to be operated. Door control panels are linked together by cable and then to the computer via 'comms converter'. Extra doors can be added with ease. An electrically operated lock/release is fitted to the door. When a legitimate card or token is presented to the reader the door will unlock. Net2 allows event reporting and printing, timed access, cards issued with timed voiding eg. valid for 24 hour only.

A significant benefit to using this system is that if a card or token is lost or stolen it can be quickly and simply invalidated and will no longer unlock the door. If the card or token is found/returned it can be used again by re-introducing and validating it. Operations are carried out by the user – no need to call an engineer.

But the biggest benefit is the ease of use and short training period for the intuitive software. Within a couple of hours of completion the software will be in action and your building secure.

To keep costs to a minimum the software is loaded on an 'old' computer you already own. Requirements are for minimum Pentium 3. The software is capable of running on networks.
