

Switch2 Access Control

Card swipe or proximity readers

Benn Switch2 Access Control

It's simplicity is it's strength

You will find door control is simplicity itself with the Benn Access Control system. Fully installed and commissioned by our own in house experts the whole system is designed to be easy to use and manage.

- ★ Access to your premises is restricted to legitimate users only
- ★ Simple for you to use and manage
- ★ Individually invalidate lost or stolen cards or tokens
- ★ Accepts up to 4,000 different users
- ★ Straightforward installation
- ★ No computer required

The Benn electronic access control system can be designed for cards or miniature tokens. Currently cards are less expensive than tokens. Installation costs are identical.

A card or token reader is installed adjacent to the door to be operated. An electrically operated lock is fitted to the door. When a legitimate card or token is presented to the reader the door will unlock.

The biggest benefit to using this system is that if a card or token is lost or stolen it can be quickly and simply invalidated and will no longer unlock the door. If the card or token is found/returned it can be used again by re-introducing and validating it. Operations are carried out by the user – no need to call an engineer. Registry is a manual system of recording card user in a simple book form.

No computer required for this installation, it does not time or record operation of the door/lock.

Your low cost solution to access worries
