

Videx VK6(S) Video Door Entry System

See who is at the door

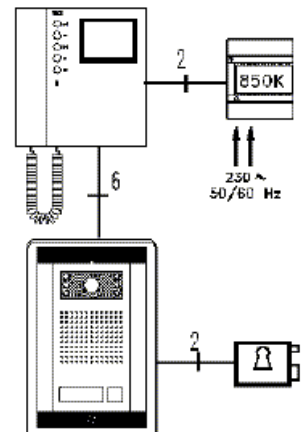

The Videx VKS Video door entry system includes a door panel with CCD camera with infra red illumination so that you can see who is at the door even in poor lighting or total darkness.

The modular construction of Videx equipment means we can add a digital key pad to the system to allow authorised personnel access to the building when required.

The video phone includes a 4 inch flat screen monitor with both contrast and brightness adjustment controls, a door control button and a camera recall button to view the door even when no-one has pressed the call button.

As standard the kit comes with monochrome camera and monitor but it is also available with colour equipment at extra cost. The colour systems are not recommended when there is poor lighting at the door - colour cameras are insensitive to infra red light.

Up to three additional video handsets can be attached to the entry unit. Other options include proximity entry, coded access, and a memory feature to record up to thirty two images from the door.
